

CREATE Micro Guidelines

Guidelines

1. CREATE Micro is a challenge designed to bring students from K-3rd grade together for a fun and creative introduction to design and robotics.
2. The challenge is purposely held during CREATE's signature event, The U.S. Open Robotics Championship, to give students and teachers alike the opportunity to see all the excitement and fun in the other four competitions going on the same day.
3. Teams are to be comprised of 3-5 students. The numbers are purposely kept low to allow for hands on involvement by every student.
4. Each team is to have one coach/facilitator and a maximum of 2 optional parent chaperones.
5. Your role as coach is to facilitate and guide. Let the students make all the decisions, but guide them to collaborate and cooperate. There are no wrong answers. The more creative the solution, the better.
6. This should be a fun activity that allows the students to explore their creativity, ability to design and build, AND their ability to work as a team.
